First Conference on Ocean Literacy in Europe:

The FIRST CONFERENCE ON OCEAN LITERACY IN EUROPE is an important milestone in developing an ocean literate society. While worldwide people express serious concern for the protection and the health of the ocean, Europe has yet to provide a structure to make Ocean Literacy its priority. Ocean Literacy is understanding how the ocean affects us and how we affect the ocean.

ORAL PRESENTATIONS

Crouch Fiona, Evy Copejans and Géraldine Fauville The European Marine Science Educators Association (EMSEA), providing learning opportunities and resources for teachers	.2
Ford Mary and Stefan Nerpin Inspiring people to care about the ocean: the National Geographic Society's support of ocean literacy	.3
Henriet Jean-Pierre Educating the next generation of marine scientists	.4
Holmes Martha Education or entertainment? Television's relationship with the oceans	. 5
Saab Waddah Ocean literacy: mobilizing society to tackle ocean challenges, what can the EU do?	.6
Seys Jan Advocating the ocean literacy principles in Europe	.7
Stel Jan H. The importance of ocean space for Europe	. 8
Strang Craig and Peter Tuddenham 10 years of Ocean Literacy in the USA and beyond: actions, results, reflections and discussion	.9
Suárez Margarida Conhecer o Oceano, a navigation chart for ocean literacy in Portugal1	10
Vallette Philippe World Ocean Network (WON): our progress and new prospects towards the blue society1	1
Van den Sande Paul and Philippe Jouk How to share ocean's health with aquarium visitors1	12
Velek Premysl See the oceans through Scientix: European marine sciences initiatives and learning resources1	13
Watson-Wright Wendy Ocean in focus: science and education for sustainable development1	14
Zwartj es Luc The importance of the ocean in geography education1	15

POSTER PRESENTATIONS

Apostoloumi Chrisa, Theodoros Kevrekidis and Athanasios Mogias Teaching ocean sciences issues in primary school using interactive whiteboard	17
Boubonari Theodora, Angelos Markos and Theodoros Kevrekidis Are Greek pre-service teachers literate on marine pollution issues?	19
Buckland Clare Knowledge exchange: plankton education and outreach activities	21
Castritsi-Catharios Jane, Anthi Dragoti and George Zouganelis Aquaria-clays and architectural models form a modern educational tool for the environmental education, fisheries and aquacultures	22
Copejans Evy, Mieke Eggermont and Jan Seys Do people have sufficient basic knowledge concerning oceans and seas?	23
Costa Raquel, Geraldes Diogo and Rafael Teresa 'Kit do Mar'. The Portuguese educational project for the ocean	24
Delgado Claudia, Murray Brown, Robert Keeley, Paul Nieuwenhuysen, Linda Pikula, Greg Reed, Pauline Simpson, Charles Sun and Peter Pissierssens Oceanteacher global classroom pilot project	25
Costas Dounas, Panayota Koulouri, Thanos Dailianis, Sarah Faulwetter, Mihail Kouratoras, Georgios Chatzigeorgiou and Christos Arvanitidis An innovative illustrated field guide for the observation and monitoring of marine biodiversity by citizen scientists	
DuesterIoh Switgard The Kodiak Ocean Science Discovery Program bridging the gap between working scientists and classroom science	27
Fockedey Nancy, Annelies Goffin, Evy Copejans, Jacques Van Bruane, Marie-Ange Demuysere, Teun De Dobbelaere, Colin Janssen & Marine@UGent consortium Ocean literacy through art: a partnership between art educators and marine scientists	28
Fockedey Nancy, Katrien Vervaele, Jan Seys and Jan Mees When a maritime author and a marine biologist write a cookbook	29
Gerdes Albert A matter of choice – ocean literacy, marine education, and YouTube	30
Goldsmith Denise Marine education and marine environmental awareness for all. Expertise, partnerships, people but no funding?	31
Kinds Arne, Magda Vincx and Nancy Fockedey The Ghent University sustainable seafood project and the role of educational institutions in raising awareness about sustainable seafood	32
Lomax Alison, Mike Williams and Nathan Brown Dolphin science workshops: a new approach to marine science education	33
MacLean Moira and Gary Fisher Discover oceanography – bringing the classroom to sea	34
Maestad Kjartan and Geir Huse Join the virtual classroom at sea	35
Marshall McLean Kimberly A. A model for successful implementation of ocean literacy concepts for elementary school educators: the importance of focusing on early childhood for ocean stewardship	36
McKinley Emma Marine citizenship: are we ready? A UK case study	37

McQuatters-Gollop Abigail and Alison J. Gilbert Why is it so hard to set MSFD indicators and targets? Messages from the plankton	
Mogias Athanasios, Theodoros Kevrekidis and Chrisa Apostoloumi Are Greek students ocean literate? Analysing ocean science issues in primary education textbooks	40
Papathanassiou M., S. Moncheva, N. Streftaris, E. Kaberi and E. Papathanassiou Mediterranean and Black Seas: a case for disseminating and communicating marine science through European projects	41
Pasotti F., J. Reubens, N. Bougos and A. Kinds Fishpop vzw: for sustainable fish populations	42
Seeyave Sophie, Trevor Platt and Shubha Sathyendranath Providing training in ocean observations for developing country scientists: the POGO experience	43
Van Nieuwerburgh Inge and Gwen Franck OpenAIRE: 2nd generation open access infrastructure for research in Europe	
Williams Mike, Nathan Brown and Alison Lomax Whale and dolphin education at sea - empowering ocean citizens	45

Teaching ocean sciences issues in primary school using interactive whiteboard

Apostoloumi Chrisa, Theodoros Kevrekidis and Athanasios Mogias

Laboratory of Environmental Research and Education, Division of Science and Mathematics, Department of Primary Education, Democritus University of Thrace, Nea Chili, GR-68100, Alexandroupolis, Greece E-mail: <u>chaposto@eled.duth.gr</u>

This paper presents a teaching suggestion, which utilizing Interactive Whiteboard potentials, aims to students of 4th grade to acquire knowledge on coastal lagoons, which constitute a common type of coastal environment worldwide, as well as to create positive feelings about coastal environments conservation. The important development of interactive environments of teaching and learning that is observed during the last years, and the educational interactive applications that continuously grow, introduce modern education technology products and offer to the teacher the possibility to actively and educationally engage the use of new technologies in teaching and learning (Twiner et al., 2010; Warwick et al., 2010). The teaching suggestion in question could be included in the effort of promoting and incorporating in the curricula more and more ocean sciences issues, having as ultimate goal the preparation and the gradual shaping of ocean-literate persons (Craig et al., 2007; Schoedinger et al., 2010). For instance, it could enrich the curriculum of primary education in Greece, whose references in ocean sciences issues are few and fragmental. The suggestion is composed by the teaching of three units, which can be implemented in at least three teaching hours. Students can work in teams of three-four persons. The teaching is performed with a polytropic presentation of clear information, with the utilization of interactive internet applications and the filling in of work sheets (Beeland, 2002; Mercer and Littleton, 2007; Alexander, 2010). In the first teaching unit, students discuss and note down in work sheets, with the use of interactive whiteboard, their pre-existing knowledge on issues regarding the basic characteristics of coastal lagoon environment, the biodiversity, functions and values of coastal lagoons, as well as their alterations caused by human activities. Thereafter, through interactive activities, they are dealing with issues and information on the basic abiotic components of the coastal lagoon ecosystem (Guelorget and Perthuisot, 1992; Kevrekidis, 2004). In the second unit, with the varied presentation of information through incorporated software tools of the interactive whiteboard, students get in touch with information concerning morphology, biology and ecology of characteristic species of macroalgae, angiosperms, benthic macroinvertebrates, fish and birds of the lagoon ecosystem, as well as the coastal lagoon food web (Nicolaidou et al., 2005). In the third teaching unit, students collect information from the internet, discuss and answer questions in work sheets that focus on the multiple natural functions of coastal lagoons and the values arising from these functions for the human being, as well as they note down the problems that coastal lagoons come up against because of human activities. At the end of the teaching units, students discuss all together, fill in an electronic work sheet by answering questions concerning the issues developed and record their suggestions regarding the actions that are necessary for the protection of coastal lagoons. By taking into account that the utilization of new technologies when teaching sciences has many positive results (Hennessy et al., 2007; Higgins et al., 2007; Warwick and Kershner, 2008), it is expected that the application of our teaching suggestion will contribute to the preparation and the gradual shaping of ocean-literate persons. Moreover, by generalizing, it is expected that the proper utilization of new technologies, when teaching ocean sciences issues, will contribute to a more efficient development of the ocean literacy.
