First Conference on Ocean Literacy in Europe:

The FIRST CONFERENCE ON OCEAN LITERACY IN EUROPE is an important milestone in developing an ocean literate society. While worldwide people express serious concern for the protection and the health of the ocean, Europe has yet to provide a structure to make Ocean Literacy its priority. Ocean Literacy is understanding how the ocean affects us and how we affect the ocean.

ORGANISERS

Marine Board (ESF) Communications Panel

InnovOcean site, Wandelaarkaai 7 (entrance 68)

8400 Oostende, Belgium

TABLE OF CONTENTS

PREFACE

Jan Mees	iii
----------------	-----

ORAL PRESENTATIONS

Crouch Fiona, Evy Copejans and Géraldine Fauville

The European Marine Science Educators Association (EMSEA), providing learning opportunities and resources for teachers	2
--	---

Ford Mary and Stefan Nerpin

Inspiring people to care about the ocean: the National Geographic Society's support of ocean literacy	3
---	---

Henriet Jean -Pierre

Educating the next generation of marine scientists	4
--	---

Holmes Martha

Education or entertainment? Television's relationship with the oceans	5
---	---

Saab Waddah

Ocean literacy: mobilizing society to tackle ocean challenges, what can the EU do?	6
--	---

Seys Jan

Advocating the ocean literacy principles in Europe	7
--	---

Stel Jan H.

The importance of ocean space for Europe	8
--	---

Strang Craig and Peter Tuddenham

10 years of Ocean Literacy in the USA and beyond: actions, results, reflections and discussion	9
--	---

Suárez Margarida

Conhecer o Oceano, a navigation chart for ocean literacy in Portugal	10
--	----

Vallette Philippe

World Ocean Network (WON): our progress and new prospects towards the blue society	11
--	----

Van den Sande Paul and Philippe Jouk

How to share ocean's health with aquarium visitors	12
--	----

Velek Premysl

See the oceans through Scientix: European marine sciences initiatives and learning resources	13
--	----

Watson -Wright Wendy

Ocean in focus: science and education for sustainable development	14
---	----

Zwartjes Luc

The importance of the ocean in geography education	15
--	----

POSTER PRESENTATIONS

Apostoloumi Chrisea, Theodoros Kevrekidis and Athanasios Mogias Teaching ocean sciences issues in primary school using interactive whiteboard	17
Boubonari Theodora, Angelos Markos and Theodoros Kevrekidis Are Greek pre-service teachers literate on marine pollution issues?	19
Buckland Clare Knowledge exchange: plankton education and outreach activities	21
Castritsi-Catharios Jane, Anthi Dragoti and George Zouganelis Aquaria-clays and architectural models form a modern educational tool for the environmental education, fisheries and aquacultures	22
Copejans Evy, Mieke Eggermont and Jan Seys Do people have sufficient basic knowledge concerning oceans and seas?	23
Costa Raquel, Geraldine Diogo and Rafael Teresa 'Kit do Mar'. The Portuguese educational project for the ocean	24
Delgado Claudia, Murray Brown, Robert Keeley, Paul Nieuwenhuysen, Linda Pikula, Greg Reed, Pauline Simpson, Charles Sun and Peter Pissierssens Oceanteacher global classroom pilot project	25
Costas Dounas, Panayota Koulouri, Thanos Dailianis, Sarah Faulwetter, Mihail Kouratoras, Georgios Chatzigeorgiou and Christos Arvanitidis An innovative illustrated field guide for the observation and monitoring of marine biodiversity by citizen scientists	26
Duesterloh Switgard The Kodiak Ocean Science Discovery Program bridging the gap between working scientists and classroom science	27
Fockedeij Nancy, Annelies Goffin, Evy Copejans, Jacques Van Bruane, Marie-Ange Demuyssere, Teun De Dobbelaere, Colin Janssen & Marine@UGent consortium Ocean literacy through art: a partnership between art educators and marine scientists	28
Fockedeij Nancy, Katrien Vervaele, Jan Seys and Jan Mees When a maritime author and a marine biologist write a cookbook	29
Gerdes Albert A matter of choice – ocean literacy, marine education, and YouTube	30
Goldsmith Denise Marine education and marine environmental awareness for all. Expertise, partnerships, people but no funding?	31
Kinds Arne, Magda Vincx and Nancy Fockedeij The Ghent University sustainable seafood project and the role of educational institutions in raising awareness about sustainable seafood	32
Lomax Alison, Mike Williams and Nathan Brown Dolphin science workshops: a new approach to marine science education	33
MacLean Moira and Gary Fisher Discover oceanography – bringing the classroom to sea	34
Maestad Kjartan and Geir Huse Join the virtual classroom at sea	35
Marshall McLean Kimberly A. A model for successful implementation of ocean literacy concepts for elementary school educators: the importance of focusing on early childhood for ocean stewardship	36
McKinley Emma Marine citizenship: are we ready? A UK case study	37

McQuatters-Gollop Abigail and Alison J. Gilbert	
Why is it so hard to set MSFD indicators and targets? Messages from the plankton	39
Mogias Athanasios, Theodoros Kevrekidis and Chrisa Apostoloumi	
Are Greek students ocean literate? Analysing ocean science issues in primary education textbooks	40
Papathanassiou M., S. Moncheva, N. Streftaris, E. Kaberi and E. Papathanassiou	
Mediterranean and Black Seas: a case for disseminating and communicating marine science through European projects	41
Pasotti F., J. Reubens, N. Bougos and A. Kinds	
Fishpop vzw: for sustainable fish populations	42
Seeyave Sophie, Trevor Platt and Shubha Sathyendranath	
Providing training in ocean observations for developing country scientists: the POGO experience.....	43
Van Nieuwerburgh Inge and Gwen Franck	
OpenAIRE: 2nd generation open access infrastructure for research in Europe.....	44
Williams Mike, Nathan Brown and Alison Lomax	
Whale and dolphin education at sea – empowering ocean citizens.....	45

Are Greek students ocean literate? Analysing ocean science issues in primary education textbooks

The ascertainment that ocean sciences are among the most underrepresented disciplines in K-12 educational curricula has led to the development of the Ocean Literacy Campaign in the USA. Within this framework, the knowledge required to be considered ocean literate in accordance with the National Science Education Standards was outlined; ocean literacy was defined and seven essential principles and forty four fundamental concepts of ocean sciences were identified (e.g. Cava *et al.*, 2005; Strang *et al.*, 2007; Cudaback, 2008; Schoedinger *et al.*, 2010). The present study attempts to portray whether these essential principles and the corresponding fundamental concepts of ocean literacy are included in textbooks of Greek primary education, and to what extent. One key issue on ocean literacy is school curricula and whether these have an ocean literacy oriented perspective. Considering the latest transitions in education worldwide, the Institute of Educational Policy in Greece started planning the revision of the Greek curricula in 2000. Maintaining the centralized character of the curriculum, the Institute proceeded to many educational innovations, based on new pedagogical and psychological theories (The Institute of Educational Policy, 2003). The textual corpus analysed in our study, consisted of textbooks used for the teaching of science issues in Greek primary education. Four textbooks were taken in consideration ('Studying the Environment', 'Geography', 'Science' and 'Environmental Education Interdisciplinary Activities Guide'). All textbooks were analysed by employing the content analysis method (Krippendorff, 1980; Mayring, 2000). Our analysis applied an a priori coding, as the requisite categories were the seven Ocean Literacy Principles (OLPs); the whole page was determined as the analysis unit, containing either phrases or depictions (photographs, drawings, charts, maps). Each textbook was studied and all the relative pages were isolated and recorded. Analysis showed that ocean science issues cover 162 out of the total 1,125 pages of all textbooks, corresponding to 15.1%; their percentages varied, among textbooks, between 7% (in 'Science') and 29.7% (in 'Geography'). Not all seven principles, neither all fundamental concepts per principle are cited. OLP 7 is not reported at any textbook or grade. The most frequently observed principles are the first, fifth and sixth; most of them occur in 'Geography' and the 'Activities Guide', whereas the fewest in 'Studying the Environment' and 'Science' textbooks. Furthermore, OLPs 1, 4 and 6 have most of their fundamental concepts covered, followed by the second, third and fifth principle. In conclusion, our study revealed that very few of the fundamental concepts are included in detail, while most of the others are represented by an almost abstract and fragmented pattern, with many inconsistencies within the same textbook or among different grades; therefore primary education students receive little information about oceans and oceanic life, and their importance not only to our own well-being, but to the welfare of the whole planet. Given the fact that Greece is a country with specific characteristics, deriving from its geographical location and maritime heritage, it is interesting to investigate the secondary education textbooks as well, in order to obtain a clearer picture of the formal education contribution to the Greek students' ocean literacy status.
