## CONFERENCE ORGANISERS

### Programme Committee

<b>George Petihakis</b>	EuroGOOS Chair, HCMR Greece
<b>Enrique Álvarez Fanjul</b>	Puertos del Estado, Spain
<b>Vanessa Cardin</b>	OGS, Italy
<b>Holger Brix</b>	Helmholtz-Zentrum Hereon, Germany
<b>Ghada El-Serafy</b>	Deltares, The Netherlands
<b>Patrick Farcy</b>	Ifremer, France
<b>Sebastian Legrand</b>	RBINS, Belgium
<b>Julien Mader</b>	AZTI, Spain
<b>Manuel Ruiz Villareal</b>	IEO, Spain
<b>Jari Happala</b>	FMI, Finland
<b>Rosalía Santoleri</b>	CNR, Italy
<b>Jun She</b>	DMI, Denmark
<b>Henning Wehde</b>	IMR, Norway

### Organising Committee

<b>Lucie Cocquempot</b>	Ifremer, France
<b>Emilie Le Guellec</b>	Ifremer, France
<b>Marie-Françoise Lalancette</b>	SHOM, France
<b>Corine Lochet</b>	SHOM, France
<b>Inga Lips</b>	EuroGOOS Office, Belgium
<b>Dina Eparkhina</b>	EuroGOOS Office, Belgium
<b>Ruxandra Bosilca</b>	EuroGOOS Office, Belgium
<b>Ana Lara-Lopez</b>	EuroGOOS Office, Belgium
<b>Vicente Fernández</b>	EuroGOOS Office, Belgium

## TABLE OF CONTENTS

Statements from the Conference	13
Ocean Health	17
Phytobs French national service of observation program for phytoplankton in coastal waters <i>Maud Lemoine and Pascal Claquin</i>	18
Entering in the BGC-ARGO Era: improvements of the Mediterranean Sea biogeochemical operational system <i>Laura Feudale, Gianpiero Cossarini, Giorgio Bolzon, Paolo Lazzari, Cosimo Solidoro, Anna Teruzzi, Elena Terzic and Stefano Salon</i>	21
An instrument intercomparison exercise in the Skagerrak allows extending the Ferrybox pCO <sub>2</sub> observational coverage across the Central and Southern North sea <i>Vlad A. Macovei, Yoana G. Voynova, Meike Becker, Jack Triest and Wilhelm Petersen</i>	30
FAIR Data	35
HIDROGRAFICO + a contribution to the knowledge of the ocean <i>Sara Almeida and Paulo Nunes</i>	36
Sensorthings API and the OGC API family of standards: A new generation of interoperability standards for research data infrastructures to further improve the sharing of Ocean Observation Data <i>Simon Jirka, Christian Autermann, Jan Speckamp and Matthes Rieke</i>	43
MELOA Catalogue and Geportal: a modern approach for open access and visualization of <i>in situ</i> drifter data <i>Félix Pedrera, João Andrade, João Matos, Enoc Martínez, José Joaquín Rojas, Pedro Gonçalves, Carlos Almeida, Marc Lucas, Rita Esteves, Joaquín del Río and Rogério Chumbinho</i>	51
International coordination of the <i>in situ</i> Met-ocean Observing Networks <i>Mathieu Belbéoch, Long Jiang, Martin Kramp, Magali Krieger, Anthonin Lizé, Emanuela Rusciano and Victor Turpin</i>	59
SeaDataCloud data products for the European marginal seas and the Global Ocean <i>Simona Simoncelli, Christine Coatanoan, Volodymyr Myroshnychenko, Örjan Bäck, Helge Sagen, Serge Scory, Paolo Oliveri, Kanwal Shahzadi, Nadia Pinardi, Alexander Barth, Charles Troupin, Reiner Schlitzer, Michèle Fichaut and Dick Schaap</i>	70
Data management for the European fleet of research vessels in Eurofleets+ <i>Thomas Vandenbergh, Susana Diez Tagarro, Dick Schaap, Guillaume Clodic, Juan Luis Ruiz, Christian Autermann and Simon Jirka</i>	78
Making sense of seabed data re-use to increase societal value using the integrated geospatial information framework to describe the process from planning to distribution to multiple users. A journey from the perspective of a hydrographic office <i>Ellen Vos</i>	84

<b>Regional Observatories</b>	<b>89</b>
<b>A decade of observations and achievements of the Moose Observatory in the Northwestern Mediterranean Sea</b>	<b>90</b>
<i>Anthony Bosse, Laurent Coppola, Pierre Testor, Dominique Aubert, François Carlotti, Pascal Conan, Xavier de Madron, Fabrizio D'Ortenzio, Wolfgang Ludwig, Laurent Mortier and Patrick Raimbault</i>	
<b>ILICO – a French research infrastructure for coastal ocean and seashore observations</b>	<b>94</b>
<i>Lucie Cocquempot, Joanne Burden, Christophe Delacourt, Jérôme Paillet, Patrick Raimbault, Guillaume Charria, François Schmitt, Serge Planes, Xavier Bertin, Stéphane Bertin, Laurent Coppola, Pierre Testor, Maud Lemoine, Pascal Claquin, Régis Hocdé, Jérôme Aucan, Sylvie Fiat, Nicolas Savoye, Pascal Conan, Laurent Testut, Médéric Gravelle, G. Woppleman, Vincent Bouchet and Nicolas Desroy</i>	
<b>Stronger together: developing the framework for a sustainable national research infrastructure EirOOS (Irish Ocean Observing System) as an effective component of the European Ocean Observing System (EOOS)</b>	<b>100</b>
<i>Paul Gaughan, Glenn Nolan, Caroline Cusack, Rob Thomas, Alan Berry, Guy Westbrook, Connall O Malley, Adam Leadbetter, Deirdre Fitzhenry, Mick Gilooly and Kieran Lyons</i>	
<b>Investigating the capability of Argo floats to monitor shallow coastal areas of the Mediterranean Sea</b>	<b>110</b>
<i>Dimitris Kassis, Giulio Notarstefano, Inmaculada Ruiz-Parrado, Vincent Taillandier, Lara Díaz-Barroso, Esterine Evard, Romain Cancouët and Luca Arduini Plaisant</i>	
<b>Al Hoceima launches its first functional marine observatory in North Africa</b>	<b>118</b>
<i>Houssini Nibani, Karim Hilmi, Asma Damghi, Laurent Berguery, Orens De Fommervault and Zouhair Amhaouach</i>	
<b>Observing Baltic Sea exchanges: presenting a new multi-platform autonomous observatory</b>	<b>124</b>
<i>Bastien Y. Queste, Sebastiaan Swart, Louise C. Biddle, Olle Petersson, Aleksandra K. Mazur and Marcus Melin</i>	
<b>Extreme events and hazard forecasting</b>	<b>137</b>
<b>Oil spill risk assessment for an oil terminal at the port of Taranto (Southern Italy)</b>	<b>138</b>
<i>Svitlana Liubartseva, Ivan Federico, Giovanni Coppini and Rita Lecci</i>	
<b>Multidisciplinary expertise of historical information for the characterization of water levels during storm and coastal flooding events</b>	<b>147</b>
<i>Nathalie Giloy and members of the Working Group 'Historic Storms and Floodings'</i>	
<b>Assessing long-term sea level evolution: the historical sea level data rescue approach</b>	<b>154</b>
<i>Alexa Latapy, Yann Ferret, Claire Fraboul and Nicolas Pouvreau</i>	
<b>Improving storm surge and wave forecasts from regional to nearshore scales</b>	<b>162</b>
<i>Audrey Pasquet, Héroïse Michaud, Léo Seyfried, Rémy Baraille, Laurie Biscara, Yann Krien and Didier Jourdan</i>	
<b>CMEMS and CYCOFOS assessing the pollution risk from the Leviathan Offshore Platform in the Eastern Mediterranean Sea</b>	<b>169</b>
<i>George Zodiatis, Svitlana Liubartseva, Loizos Loizides, Marco Pellegatta, Giovanni Coppini, Robin Lardner, George Kallos, Christina Kaloger, Roberto Bonarelli, Antonio Augusto Sepp Neves, Panicos Nikolaidis and Avigdor Brillant</i>	

<b>Ocean Observing Technologies</b>	<b>179</b>
Autonomous technologies a new approach to the development of hydrography <i>Petrica Popov, Emanuela Mihailov and Lucian Dumitrache</i>	180
JERICO-S3 integrated innovative technologies for coastal monitoring <i>Eric Delory, Simone Marini, Jérôme Blandin, Catherine Boccadoro, Dominique Durand, Andrés Cianca, Joaquin Tintore, Jay Pearlman, Miguel Charcos, Miguel Ángel Alcalde, Juan Gabriel Fernandez and Laurent Delauney</i>	186
EUROFLEETS: fostering links to industry in the advancement of equipment innovations for deep sea operations from research vessels <i>Niamh Flavin, Aodhán Fitzgerald, Arturo Castellon Masalles, David Waage, Lars Jørgensen Jan Kjærstad and Jarle Sigurd Ødegård</i>	193
<b>Regional local and coastal models</b>	<b>203</b>
The BOOS Modelling Programme (BMP) – activities, working groups and plans <i>Thorger Brüning, Jens Murawski, Joanna Staneva, Vilnis Frishfelds, Adam Nord and Jun She</i>	204
Recent developments in the forecasting chain at arpa-e-simc for the Emilia-Romagna (Northeast Italy) coastal areas <i>Luis Germano Biolchi, Silvia Unguendoli, Lidia Bressan and Andrea Valentini</i>	208
SHOM Operational Regional Ocean Forecasting System <i>Stéphanie Louazel, Sophie Casitas, Stéphanie Corréard, Yann Ferret, Victor Quilfen and Guillaume Voineson</i>	216
Recent progress in downscaled local ocean forecast models for Irish maritime users <i>Hazem Nagy, Kieran Lyons, Joseph McGovern, Diego Pereiro, Ioannis Mamoutos, Glenn Nolan and Tomasz Dabrowski</i>	223
Seasonal stratification and biogeochemical turnover in the freshwater reach of a partially mixed dredged estuary <i>Johannes Pein, Annika Eisele, Tina Sanders, Ute Daewel, Emil V. Stanev, Justus E. E. van Beusekom, Joanna Staneva and Corinna Schrum</i>	230
New coupled forecasting system for the Baltic Sea area <i>Adam Nord, Tuomas Kärrä, Anja Lindenthal, Patrik Ljungemyr, Ilja Maljutenko, Saeed Falahat, Ida M. Ringgaard, Vasily Korabel, Hedi Kanarik, Svetlana Verjovkina, Simon Jandt with support of the whole BAL MFC team.</i>	238
COASTAL CRETE: A high-resolution operational forecasting system for the coastal area of Crete, Eastern Mediterranean <i>Katerina Spanoudaki, George Zodiatis, Nikos Kampanis, Maria-Luisa Quarta, Marco Folegani, George Galanis, Marios Nikolaidis and Andreas Nikolaidis</i>	245
<b>Copernicus Marine Products and Services</b>	<b>255</b>
The Arctic marine forecasting center in the first Copernicus period <i>Laurent Bertino, Ali, A., Carrasco, A., Lien V.S. and Melsom, A.</i>	256
Improving the accuracy of the Black Sea physics analysis and forecasting system in the framework of Copernicus Marine Service <i>Stefania A. Ciliberti, Eric Jansen, Diana Azevedo, Mehmet Ilıcak, Murat Gunduz, Marius Matreata, Leonardo Lima, Ali Aydogdu, Salvatore Causio, Laura Stefanizzi, Sergio Creti', Rita Lecci, Elisaveta Peneva, Simona Masina, Giovanni Coppini, Nadia Pinardi and Atanas Palazov</i>	264

<b>The Copernicus Marine Service Ocean Forecasting System for the Mediterranean Sea</b>	<b>272</b>
<i>Giovanni Coppini, Emanuela Clementi, Gianpiero Cossarini, Gerasimos Korres, Massimiliano Drudi, Carolina Amadio, Ali Aydogdu, Paola Agostini, Giorgio Bolzon, Sergio Creti, Dimitra Denaxa, Valeria Di Biagio, Romain Escudier, Laura Feudale, Anna Chiara Goglio, Alessandro Grandi, Paolo Lazzari, Rita Lecci, V Vladyslav Lyubartsev, Simona Masina, Francesco Palermo, Nadia Pinardi, Jenny Pistoia, Stefano Salon, Michael Ravidas, Cosimo Solidoro, Anna Teruzzi and Anna Zacharioudaki</i>

## Abstract

To achieve the Sustainable Development Goal (SDG) 14 focusing on the ocean, people need to understand the role and function of the ocean and be aware of issues concerning protection and sustainable use of its resources. The Ocean Literacy Framework is now being used worldwide for both formal (schools, universities) and non-formal (e.g. research institutes, aquaria) education settings. The present pilot study aims to this direction by evaluating ocean sciences content knowledge of students attending a middle school of Arts in Greece. A structured questionnaire was administered to 162 students, while the influence of certain demographics on students' knowledge level was also investigated. The results of the study revealed moderate knowledge, which is in line with the limited relevant literature regarding both knowledge gains and misconceptions, and the need for integration of relevant concepts in education to ensure sustainability of the ocean.

**Keywords:** Ocean Literacy, SDG 14, marine science education, Mediterranean region, secondary school students

## 1. Introduction

The Ocean Literacy Framework consisting of 7 essential principles and 45 fundamental concepts is now accepted worldwide for use in both formal (schools, universities) and non-formal (e.g. research institutes, aquaria) education settings to empower citizens to use knowledge of the ocean and awareness of its issues and therefore to communicate about the marine environment in a meaningful way and make informed and responsible decisions. The present pilot study aims to this direction by evaluating ocean sciences content knowledge of students attending a middle school of Arts in Greece.

## 2. Methodology

In total, 162 students comprised the sample of the study (36% grade 7, 35.4% grade 8, 28.6% grade 9). Females comprised 66% percent of the participants. The majority of students (85.7%) stated that they have participated in environmental education projects, while they receive relevant information mostly from the internet (88.3%). A structured questionnaire was designed according to previous research (see Mogias *et al.*, 2019), consisting of a demographics section, and a section including a content knowledge scale with 16 multiple choice questions, and a short beliefs scale with 4 statements. Data analysis involved descriptive (frequencies, mean values, and standard deviations) and inferential statistics (t-tests for independent samples and one-way analyses of variance). All statistics were performed using the Statistical Package for Social Sciences (SPSS, v. 23); significance level was set at a probability value of 0.05.

## 3. Results & discussion

Middle school students were found to possess moderate level of ocean sciences content knowledge, as the mean relative frequency of correct answering among students was 45.9% (Table 1), and positive beliefs (mean value: 3.79) toward ocean stewardship (Table 2). Regarding background factors, no significant differences were revealed. The results showed an interesting pattern in correct answering, regarding the most difficult and the easiest questions, revealing that they are in line with other findings from the existing literature (Mogias *et al.*, 2019; Realdon *et al.*, 2019; Mokos *et al.*, 2020). Topics such as connectedness of the ocean basins (q1 and q8), origin of the atmospheric oxygen (q9), and global water cycle (q5) were failed to be addressed by the majority of the students' sample, revealing the existence of misconceptions, as well as either lack of assimilation of new or already existing concepts. Along with assessment of students' knowledge, attitudes and behaviour, European Blue Schools network has been recently launched and inter-disciplinary collaborations are enhanced through specific initiatives such as projects (e.g. ERASMUS+) and networks (e.g. EuroGOOS, EMSEA, EU4Ocean Coalition) in order to achieve the SDG 14 focusing on the ocean and create an ocean-literate society.

Table I. Number of students (n), relevant frequencies (rf) of correct answers per question, and alignment with the 7 essential principles (OLPs)

	CONTENT KNOWLEDGE QUESTIONS	N	RF	OLPs
q1	If I had a boat, I could theoretically travel in every part of the ocean	18	11.4	1
q2	If I walk in the mountains and sea a rock containing a fish fossil, it means that <b>the sea was once at a higher level than it is today</b>	18	11.4	2
q3	The first living organisms on earth lived <b>in the sea</b>	114	70.4	4
q4	The marine environment is home to <b>different animal species depending on sea depth</b>	85	52.8	4
q5	Most of the rainwater falling on land <b>originates from the tropical ocean</b>	32	20.1	3
q6	The Mediterranean Sea is home <b>to organisms of many different species</b>	113	71.1	5
q7	The least explored environment is <b>the deep sea</b>	72	45.3	7
q8	The Aegean Sea is connected to <b>all seas on the Earth</b>	36	22.5	1
q9	The main source of the oxygen that living beings breathe, <b>is the ocean</b>	20	12.7	4
q10	The largest animal on Earth <b>lives in the sea</b>	124	77.5	5
q11	The shape of the beach is mainly influenced <b>by the sea waves</b>	80	50.6	2
q12	The climate of my home town would experience <b>warmer summers and colder winters</b> if there were no sea nearby	65	41.1	3
q13	Most of the world goods are transported <b>by ships</b>	111	70.7	6
q14	Most of the water on earth is <b>in the ocean</b>	107	66.5	1
q15	The ocean resource which is most at risk of being exhausted <b>is fish</b>	83	52.2	6
q16	Scientists think that world climate change will cause <b>sea-level rise</b>	94	58.4	1

Table II. Mean values ( $\pm$  standard deviation) of beliefs per statement

	BELIEF STATEMENTS	MEAN	$\pm$ SD
s1	The sea influences my life even if I live far away from it	3.92	1.04
s2	We need to study more the sea so we can protect it more successfully	4.09	1.01
s3	Whatever I through in the sink influences the sea	3.40	0.97
s4	The sea is a source of wealth and offers many jobs	3.76	1.03

## Acknowledgements

We would like to cordially thank the teachers and students of a middle school of Arts from Greece for their substantial assistance in the participation of the research.

## CONFERENCE 2021

The 9<sup>th</sup> EuroGOOS International Conference was the first virtual conference of EuroGOOS and was well received by the oceanographic and forecasting community. The participation of more than 530 people from over 40 countries around the world demonstrated the willingness of the ocean observing community to come together and showcase the latest achievements in operational oceanography, data management, and service delivery.
